

ASPIRING DATA SCIENTIST

Motivated Data Science student with strong analytical skills and practical experience in predictive modeling, EDA, and dashboard development. Eager to contribute to a dynamic organization by delivering actionable insights and building models that improve operational efficiency.

TECHNICAL SKILLS

Languages	: Java, python,SQL
Relevant Skills	: EDA, Feature Engineering, Data Cleaning, Preprocessing, Model Evaluation and optimization, Statistical Analysis
Libraries	: Scikit-learn,Tensor flow, Sentence Transformer,Keras,Pandas,Numpy,Matplotlib,Seaborn
Databases	: MongoDB, PostgreSQL,Mysql
Visualisation Tools	: Power BI, Tableau, seaborn, matplotlib

EXPERIENCE

Customer Support Executive TCL	Aug 2022 – May 2024 Bangalore, Karnataka, India
- Resolved customer queries and provided support through phone/email/chat. - Analyzed customer issues and identified common patterns to improve service quality. - Maintained detailed records, logs, and reports for daily operations. - Collaborated with internal teams to ensure timely issue resolution. - Improved customer satisfaction through clear communication and problem-solving. - Developed interest in using data and patterns from customer interactions to improve service efficiency, which motivated me to pursue Data Science.	

EDUCATION

Vellore Institute Of Technology Masters in Data Science	Vellore, TamilNadu, India Jul 2024 – May 2026
Jain Arts and Science College BCA	Vaniyambadi, TamilNadu, India Jul 2018– May 2021

PROJECTS

Real-Time News Sentiment Analysis System	Python, NLP, VADER, Streamlit, SQLite, NewsAPI
Built a real-time news analyzer using NewsAPI and VADER to classify sentiments.	
Achieved 73% accuracy on labeled data.	
Implemented SQLite storage and topic-wise sentiment tracking.	
Suggested improvements using BERT, LSTM, and multilingual NLP.	
Privacy-Preserving Multi-Client Spam Detection System	
Developed a high-accuracy (98%+) spam detection system using MiniLM/BERT embeddings, XGBoost, Federated Learning, and Agentic AI for automatic drift detection and self-retraining.	
Designed a privacy-preserving multi-client architecture where data remains on-device, achieving a robust global model with 98.56% accuracy and a 94% F1-score.
